Stainless Steel Foil Rolls

Stainless Steel Foil Wrap is typically used in heat treating applications to eliminate scale and discoloration of parts. It also protects parts from oxide buildup.

Material is of the highest quality making it easy to fold and form. No oxide on foil

SPECIFICATIONS

- No special controlled atmospheric furnaces are required
- 321-ANN for heat treating of parts up to 2000°F, 309-ANN for heat treating of parts up to 2400°F
- 40.00" wide material available upon request. Great for wrapping of large parts
- Slitting capabilities down to .0002" thick and .100" wide

Alloys 302/304, 309, 316, 321

Tempers All tempers available

Gauges .0002" to .012" **Widths** .100 ' to 41.00" **Finishes** Mill
